Artisanal recordings made by engineer Ira Norman Segal
blending audiophile techniques with outstanding musical artists

"This was without question one of the finest recordings I have ever heard. Instruments had a more natural tonal quality than I thought possible, and the sense of space they conveyed was astonishingly realistic..."

Laurence Borden, Editor, Stereo Times

"They have everything we look for in recordings - a sense of air and of the size of the recording space. It sounded like the instruments were right there in the room with us - and the rich tone. They are very organic. I got a sense that I heard exactly what you were going for. What's important to express is that you're more than just an engineer.... this is art. I'm very impressed."

Alan Saslow

"It sounds like the instruments are in the room, my speakers have disappeared. The musicians are sitting right here. This sounds like a record with no surface noise. It doesn't matter if this is digital or analog. This is amazing. I've never heard anything sound so real. You've taken it to another level."

Frank Stankowski
